DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-38 & 42-66, drawn to Data Processing: Speech Signal Processing, Linguistics, Language Translation, and Audio Compression-Decompression – Speech Signal Processing – Recognition – Word Recognition; classified in class 704, subclass 251.
 - II. Claims 39-41, drawn to Speech Signal Processing, Linguistics, Language Translation, and Audio Compression/Decompression – Speech Signal Processing – Recognition – Word Recognition – Specialized Equations or Comparisons; classified in class 704, subclass 241.
 - III. Claims 67-73, drawn to Data Processing: Speech Signal Processing, Linguistics, Language Translation, and Audio Compression-Decompression – Speech Signal Processing – Application – Speech Assisted Network, classified in class 704, subclass 270.1.
2. The inventions are distinct, each from the other because of the following reasons:
 - Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2)

Art Unit: 2654

that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a comparator using dynamic time warping is not required for word similarity comparison. The subcombination has separate utility such as in a Translation Machine for Partial Translation.

- Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because speech recognition does not necessarily involve a network. The subcombination has separate utility such as for voice operation of an Internet or intranet browser.
- Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because network control by voice recognition does not require calibration of words. The subcombination has separate utility such as to select recognition grammars by demographic speech characteristics based on the results of comparative analysis of speech similarity.

3. A telephone call was made to Mr. Mitchell Brook on 12 April 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
